# WHAT YOU NEED TO KNOW ABOUT SOLAR?

Are you thinking about installing solar? We try to make the interconnection very simple for our members. The most important aspect is keeping us informed and give us some notice for scheduling purposes. Currently, we have interconnected solar systems that range in size from 4 kW to 25 kW. A size of 25 kW is our limit.

## FACTS TO KNOW-

- **Our net metering rate is a one for one rate. Every kWh put back on the REMC system is a full 1 kWh credit to the member. However, we won't write a check for the credits, and the credits are nontransferable if service ends or the account transfers names.**
- **We do program the meter for bi-directional usage (delivered and received), the net will show on the bill along with any kWh credits.**
- **We require all interconnected members to provide proof of a \$1,000,000 insurance liability policy. Please contact your insurance agent for coverage options.**
- **Due to the additional metering and billing involved with the account, there will be a net-metering customer charge.**

## Application for Net Metering-

Account Number: Serv Map Loc:

Name:

Address:

City: Zip:

Billing Address:

City: Zip:

Date Passed Inspection:

Service Order/Work Order Number:

Size of Generation (total nameplate):

Type of Generation:

IEEE 1547 Compliant Device:

Attach Proof of Insurance

By signing below I agree to follow the guidelines listed in the Public Utility Regulatory Act (PURPA) and Boone REMC guidelines for Net Metering and will be placed on the Net Metering Rate (NM-2).
