

A Touchstone Energy® Cooperative

WHAT YOU NEED TO KNOW ABOUT SOLAR?

Are you thinking about installing solar? We try to make the interconnection very simple for our members. The most important aspect is keeping us informed and give us some notice for scheduling purposes.

FACTS TO KNOW-

- **Our net metering rate is a one for one rate. Every kWh put back on the REMC system is a full 1 kWh credit to the member. However, we will not write a check for the credits, and the credits are nontransferable if service ends or the account transfers names.**
- **Sizing requirements: Any solar array 25KW and larger Boone REMC will need to get written consent from our wholesale power provider, Wabash Valley Power Alliance.**
- **We do program the meter for bi-directional usage (delivered and received), the net will show on the bill along with any kWh credits.**
- **We require all interconnected members to provide proof of a \$1,000,000 insurance liability policy. Please contact your insurance agent for coverage options.**
- **Inverter must be IEEE 1547 Compliant.**
- **Due to the additional metering and billing involved with the account, there will be a net-metering customer charge.**
